HP App Center Program Description

The HP App Center is part of the cloud ecosystem created for developers to Submit, Iterate and Publish your finished app(s) for consumption by HP Printer clients. It provides a single access point to submit all the related meta data that will be used to describe your app so that resellers can discover the advantages and use cases for your application. It is also where HP will perform its Verification and Validation (VAV) assessment process which reviews all code and guarantees the security level of your app. And finally, you select which Enrollment Plan fits your organization’s needs.

Workpath Distribution and Marketing Plan Options

**Private** - Only Specific Reseller can view and install your app  
**Listed** - Your app is exposed to resellers to deploy to customers, developer is responsible for Agreements and Billing  
**Transacted** - Channel Partners and Direct HP Business can deploy, Agreements and e-Commerce are provided through HP service

Whatsoever App enrollment plan you prefer, HP does it’s best to meet your needs

App Center Stages

The detailed stages of App Center include:

1. **App Submission**
   a. Once you have finished app development, you submit your App for VAV review and publishing

2. **App Enrollment - Details and Data**

- HP App Center is the platform used to submit your Apps for publication in the HP Workpath Ecosystem.
- Once app development is completed, finished app is uploaded along with related marketing and sales information for viewing in the app catalogue.
- HP reviews the app or security vulnerabilities and reports detailed results for fixes if required.
- Developer chooses an enrollment plan that fits your app distribution needs, marketing requirements and program goals.
a. Developer must provide details regarding the app that will be used in the catalogue to provide details for review
   i. App name and version number
   ii. Copy of the HPK file
   iii. Icons
   iv. Descriptive Images
   v. Video
   vi. User Guide
   vii. Link to further details
b. Including complete and detailed information, in an easy to read format, should result in more discovery and deployment by Channel Partners.

Plan Option Summary

Developer can choose a plan that fits their marketing needs from Schedule 4 of the Agreement
1. Private Plan
   a. This is our innovation entry point for developers to test their app and adjust before it is released to the
open market. It will not be listed in the Catalogue for wider discovery and distribution.

b. A private App is created for 1 customer or specific reseller and can be deployed using HP Command Center tools.

c. Includes up to 4 VAV reviews per app per year

2. Listed Plan

a. For an annual fee of $700 per app, a developer can select the Listed Plan level of Marketing and Distribution. Pricing plans can be included for each app.

b. Developer owns the End-2-End business process which requires separate Agreements with each reseller

c. Includes up to 4 V+V reviews per app per year

d. Listed apps are discoverable by all Resellers and deployed to an unlimited number of end users

3. Transacted Plan

a. For an annual fee of $400 per year per app PLUS a 20% Revenue Share, a developer can select the Transacted Plan level of the Marketing and Distribution.

b. Includes unlimited VAV reviews per app per year as schedule allows.

c. Developer has access to the HP e-Commerce system run by a Third-Party Payment Processor (Merchant of Record) which allows purchase on a monthly subscription basis with tiered discount pricing if desired.

d. All transacted apps will be covered by a single centralized set of Terms and Conditions eliminating separate Agreement negotiations.

e. Apps could be made available, promoted and sold to Direct HP Enterprise Program customers, subject to a review by HP regarding extensibility, support and demand in the market.

## App Center Management Benefits

Using App Center, developer can easily check on the progress of their app through the VAV review process required before publishing.
A Management Dashboard will allow developers in the future to easily find and manage information about their app status, income generation and expected monthly payments.
